Upverter & International NodeBots Day
Introduction to Hardware

Are you planning to attend the International NodeBots Day in the South Bay? If you are just discovering the hardware world, we have something for you.

Design a circuit board on Upverter; make it great and Arduino compatible. Submit your boards. The first 20 submissions will be manufactured and waiting for their designers on July 27th at the event!

All the boards submitted after Thursday July 18th will not be considered.

How does this work?

(1) Create an Upverter account. Choose a template, start a design from scratch or fork one other user's design.

(2) Draw the schematics and the circuit board. Make sure you make it Arduino compatible.

(3) Once you are ready to go, tweet your design link to @upverter and @nodebotsday using the hashtag #hardwareintro

Your tweet should be something like "http://ow.ly/mQAGl @upverter @nodebotsday #hardwareintro"

What happens next? If you are one of the first 20 hackers to submit your design, you will be given your board and parts when you arrive at the International NodeBots Day.

If you need help with your design or for any further information please contact us using the hashtag #hardwareintro

You can also ask the Upverter community to review your design before you submit it!

Good Luck.
